4# NEWSLETTER

Dear friends and partners,

The Drops of Sustainable Development project continues to grow!
Over the past months, our partnership has achieved important milestones in developing innovative educational tools for sustainability and green skills.
Here's what we've accomplished so far:

1. E-learning Platform Ready

The DSD E-learning Platform is now fully developed and accessible online.

The platform includes:

- Educational modules
- Interactive exercises
- Sustainability learning resources
- Digital learning tools for educators and learners

Platform:

<https://platform.drops-sustainability.eu/login>

2. Interactive Simulation Exercises

We are excited to announce that the Interactive Simulation platform is now available!

The simulation was created to support experiential learning and help participants better understand sustainability challenges through practical and engaging activities.

Explore it here:

3. LTTA Successfully Completed

Our Learning, Teaching and Training Activity (LTTA) in Zaragoza, Spain has officially been completed.

During the international training sessions, partners and educators tested project materials, exchanged experiences, and explored new approaches to Education for Sustainable Development (ESD). The activity provided valuable feedback that will help us improve the learning experience even further.

4. Testing Phase Begins

We are now entering the testing and evaluation phase of the project.

Partners and participants will begin testing:

- Interactive exercises
- Learning modules
- Platform usability
- Educational activities and simulations

The feedback collected during this phase will help us finalise the project outputs and prepare them for wider implementation.
